SWitCH_QA Project

2022-2023 Ed.

Sprint 4 Goals

Sprint 4 Goals – New Functionality

- Add a new functionality that displays the Posts by ascending order regarding the number of votes
  - This should result in a new section/tab in the main page of the app

- Update the user profile page so that it:
  - displays the following: user name; email; number of Posts of this user; number of comments of this user; user name that has the greatest number of comments and his/her number of comments.
  - includes a "delete" button that can be used to delete the user (only if he/she does not have posts and comments)

Sprint 4 Goals – Coding Standards

- Define a set of coding standards to be used in the project
  - Apply these coding rules using *Prettier*
- Explore also best practices for code documentation and try some implementation with *Tsdoc*

Sprint 4 Observations

- Be aware that the new functionality may require updating the backend and the frontend and, eventually, the database

- For new functionalities, a User Story should be created and documented, according to the existing template

- Do not forget to develop tests for the new functionality (focusing on the backend)

- Apply pair-programming
